## Quick sepsis-related organ failure assessment

Esta prueba permite identificar pacientes fuera de UCI con riesgo de desarrollar sepsis, para disminuir la mortalidad asociada a la misma.

### Estado mental alterado

Glasgow < 15

TA sistólica  
 $\leq 100\text{mmHg}$

Frecuencia  
respiratoria  
 $\geq 22/\text{min}$

**Score  $\geq 2$  asociado con pobre diagnóstico por sepsis, necesaria vigilancia estrecha**
